

Auxiliary Request 7a - Clean

- 5 1. Nozzle (1) for a vacuum cleaner (2), the nozzle (1) comprising:
- a rotatable member (3) for picking up particles from a surface to be cleaned,
the rotatable member (3) being arranged around a longitudinal axis (10), and
- a cleaning arrangement for removing articles entangled to the rotatable member
(3), the nozzle being characterized in that it further comprises:
10 - a nozzle cover (12) that at least partly is made of transparent material such that
the rotatable member (3) may be visible through the nozzle cover (12),
wherein the cleaning arrangement comprises a cleaning member (5) and a
support surface (4) provided on a radially projecting member of the rotatable member
(3),
15 wherein the cleaning member (5) is movable between a resting position in which
the cleaning member (5) is arranged at a distance from the support surface (4) and a
cleaning position, and
wherein the cleaning member (5) is moved from the resting position to the at
least one cleaning position by applying a pressing force to a push button (6) provided on
20 the nozzle (1) at a surface turned towards a user.
2. The nozzle (1) according to claim 1, wherein the cleaning position is in the
vicinity of the rotatable member in which the cleaning member (5), during rotation of
the rotatable member (3), co-operates with at least one segment (4a) of the support
25 surface (4) to remove any entangled articles from the rotatable member (3).
3. The nozzle (1) according to of claim 2, wherein the at least one radially
projecting member (13) is helically arranged along a longitudinal axis (10) of the
rotatable member (3).
30
4. The nozzle (1) according to claim 2 or 3, wherein the cleaning member (5) is
connected via a linking mechanism (7) to the push button (6) on the nozzle (1).
5. The nozzle (1) according to anyone of claims 2, 3 or 4, further comprising:
35 - lighting means (15) arranged at the rotatable member (3) for illuminating at
least parts of the rotatable member (3).
